

## The Game of Life and Death

- Welcome to the Game of Life and Death (GOLAD)! This is a two player game which requires you to know the rules of Conway's game of life and the ability to plan out into the future.
- How it works
  - The simulation observes all the rules of Conway's game of life. However, in between generations each player will have the opportunity to place squares of their own color.
  - In the simulation, when a new cell is being born, it's color will be the color of the majority of it's parents. Since these cells can only be generated with three living neighbors, there will always be a majority
- How you play
  - Simply click on the board where you would like to add your square when it is your turn
- How it ends
  - The game will end after 10 generations.
